Chocolate Sale:

**Brief:**
Your class is planning to sell chocolates to raise money for an excursion. Families will be able to order chocolates in groups of 2, 5 or 10. The most anyone can order is 50 chocolates. Your job is to decide on the best way to package the orders. You will also need to work out how much each order will be sold for. They will cost $1 for 2 chocolates.

**Key questions to think about:**
1. What are all of the different order sizes that are possible?
2. How will you change the packaging to suit different orders?
3. How much will each sized order cost?

**What you need to hand in:**
1. Information that shows:
   - All of the different order sizes possible
   - How much each of these orders will cost
2. A description of the way in which each sized order will be packaged
