Muffin Sale:

Brief:
Your class is planning to sell muffins to raise money for an excursion. Families will be able to order muffins in groups of 10 or 20. Your job is to work out how much of each ingredient will be needed depending on the size of the order and decide on the best way to package the orders. You will also need to work out how much each order will be sold for. They will cost $2 for 5 muffins.

Recipe: Muffin Mix
This recipe makes 10 muffins

1 Cup self-raising flour
1 cup wholemeal flour
1 egg
180ml milk
120ml vegetable oil
160g brown sugar
1 cup frozen blueberries or raspberries

Key questions to think about:
1. How will you change the recipe to suit different orders?
2. What is the best way to record the ingredients you will need for each sized order?
3. How will you package the orders so that the muffins do not get damaged?
4. How much will each sized order cost?

What you need to hand in:
1. Information that shows:
   o How much of each ingredient will be needed for orders of 10, 20, 30, 40 or 50 muffins
   o How much each of these orders will cost
2. A description of the way in which each sized order will be packaged
