School Lunch 2:

Brief:
School canteens offer healthy food at low prices for students to buy for their lunch. Your job is to plan a school canteen menu. Your menu must have many healthy lunch options that have 2 or 3 items and cost no more than $6 in total.

Key questions to think about:
1. How many items will you have on your menu?
2. Have you included a range of food and drink items?
3. Which items will go together to make a healthy lunch that students would like?
4. How much would each item cost so that the lunch doesn’t cost more than $6?
5. How many different combinations of items can be bought for $6 or less?

What you need to hand in:
1. A menu showing food and drink items and how much each one costs
2. Proof that students can buy a healthy lunch for $6 or less
3. A list of all the food and drink combinations that can be bought for $6 or less. For each combination, you will need to list:
   - The items included
   - The total cost of the lunch order
   - How much change will be received from $6
