

# Fixing Misconceptions in: Early Number Concepts (K-2)

One-day training course with Leah O'Neill

**Wednesday, 24th April 2019**  
hosted by  
**Harvest Home Primary School**

Quantity and Partitioning are some of the most important concepts for students to understand to develop **Number Sense** in the Early Years of Kinder, Foundation, Year One and Year Two. By fixing these, we can catch kids up quickly and effectively on concepts that should have developed from K-2, building a firm foundation for later learning.

This course is ideal for:

- K-2 Teachers
- Learning Support Teachers
- 3-6 Teachers with students who appear to not understand numbers to 100
- Numeracy coaches school Leaders who want to learn about sustainable whole-school change

**How do we know it works? We already checked in Partnership Projects:**

**Project 1:** Effect size of 1.02 for 137 F-2 students over 10 weeks for 2 lessons per week.

**Project 2:** Effect size of 0.71 for 497 F-3 students over 8 weeks for 2 lessons per week.

[View Tierney's latest peer-reviewed data here](#)

## Teachers will

- Watch a live lesson demonstration, including diagnosing and confronting underlying misconceptions in a Grade One or Reception class
- Learn to prioritise key components of Number Sense that must be understood deeply during the early years
- Learn how to use questioning to create cognitive conflict and fix misconceptions for good,

**All attendees also receive** a manual complete with diagnostic testing, lessons to target misconceptions, homework for parents and games to play to take back and use at their schools.

---

*Numbers are strictly limited to 40*
