Have you ever wished that maths made more sense, either for yourself or for your kids?

Have you wanted to incorporate more **hands-on materials** and **group work**, or **differentiate** more effectively?

The wait is over!

Come along and use hands-on materials to explore how concepts are connected. Leave feeling more confident in your own understanding, and in your ability to help kids to really “get” maths. This course is suitable for teachers and for teacher aides.

Together we will:

- Explore concepts using hands-on materials and drawing
- Examine student work samples and find misconceptions
- Unpack and play simple games to help build skills
- Answer your real, honest questions, about any areas of maths that you find tricky

You will be provided with more than 60 different games and tasks to use the next day, including:

- Game templates and instructions
- Card sets and instructions
- Placemats for fluency tasks and instructions

You will also take home:

- Some hands-on materials to get you started
- Questions to use with students to find out where they are stuck
